Evaluation of the Older Americans Act
Title III-C Nutrition Services Program:
Participants’ Food Security, Socialization,
and Diet Quality

2017 National Home and Community Based Services (HCBS) Conference
Thursday August 31, 2017
Presenters

- Heather Menne, Administration for Community Living
- James Mabli, Mathematica Policy Research
- Liz Gearan, Mathematica Policy Research
U.S. Administration for Community Living

ACL brings together the Administration on Aging, the Administration on Intellectual and Developmental Disabilities, the National Institute on Disability, Independent Living, and Rehabilitation Research, and the HHS Office of Disability.

Mission
Maximize the independence, well-being, and health of older adults, people with disabilities across the lifespan, and their families and caregivers.

Vision
All people, regardless of age and disability, live with dignity, make their own choices, and participate fully in society.
Office of Performance and Evaluation

Mission:
To measure and evaluate the impact of ACL programs, their effectiveness in achieving stated goals in general, and in relation to their cost, their impact on related programs, their effectiveness in targeting for services unserved older individuals and persons with disabilities, and their structure and mechanisms for delivery of services, including, where appropriate, comparisons with appropriate control groups composed of persons who have not participated in such programs.
Office of Performance and Evaluation

Why evaluate?
With the changing demographics in the U.S., ACL and the aging and disability networks face exponentially increasing demands for comprehensive and coordinated supportive services. These increasing demands require rigorous and independent assessment of progress, efficiency and effectiveness to ensure the most productive use of government funds for the best citizen outcomes.
Title III-C Nutrition Services Program

The purpose of the Older Americans Act Nutrition Services Programs are to:

• Reduce hunger and food insecurity among older individuals,
• Promote socialization of older individuals,
• Promote the health and well-being of older individuals, and
• Delay adverse health conditions for older individuals.

They fulfill their purpose by providing access to healthy meals, nutrition education and nutrition counseling.
Title III-C Nutrition Services Program Facts

In 2015:
• > than 76 million congregate meals were served to 1,554,658 people
• >140 million home-delivered meals were served to 847,526 people
• > 72 thousand sessions of nutrition counseling were offered
• > 3 million nutrition education events were conducted

Source: State Program Reports (SPR; 2015) via the AGing Integrated Database (AGID), https://agid.acl.gov/
Title III-C Nutrition Services Program Facts

Does the program help you...?

- **Stay in own home**
  - Congregate Meal: 63.4%
  - Home-delivered Meal: 92.7%

- **Feel better**
  - Congregate Meal: 84.1%
  - Home-delivered Meal: 91.3%

Findings from the Administration on Aging Title III-C Nutrition Services Program Outcomes Evaluation

HCBS Conference
Baltimore, Maryland

August 31, 2017

James Mabli
Liz Gearan
Heather Menne
Title III-C Nutrition Services Program (AoA Nutrition Programs)

- Adequate nutrition is critical for people of all ages, but especially important for older adults.

- Administration on Aging (AoA) Nutrition Services Program (NSP) plays a vital role in ensuring needs of older adults are met.

- Program services include:
  - Nutrition services
    - Congregate and home-delivered meals
    - Nutrition screening, assessment, education, and counseling
  - Other services
    - Health promotion
    - Medical screening
    - Social or recreational activities
Administration of AoA Nutrition Programs

- AoA within Administration for Community Living (ACL)
- AoA Central and Regional Offices
- State Units on Aging (SUAs)
- Area Agencies on Aging (AAAs)
- Local Service Providers (LSPs)
1. Process study
   – Provide information to support program planning
   – Analyze program structure, administration, staffing, coordination, processes, and service delivery

2. Cost study
   – Estimate the average cost of a congregate and a home-delivered meal
   – Assess variation in costs by select characteristics of local providers

3. Outcomes evaluation (ongoing)
   – Assess program effectiveness in improving food security, socialization, and diet quality
   – Assess program effectiveness in improving longer-term health and delaying or avoiding institutionalization
Objectives of the Outcomes Evaluation

1. Describe participants’ demographic and household characteristics, health status, mobility, eating behaviors, diet quality, food security, and socialization

2. Describe participants’ experiences with and impressions of the program and their valuation of meals and supportive services received through the program

3. Determine the impact of meals and related services on participants’ nutrition, food security, and diet quality

4. Determine the impact of meals and nutrition services on overall wellness and well-being
Study Design of Outcomes Evaluation

1. Sample of LSPs from process and cost studies
2. Selected congregate meal site for each LSP
3. Sampled congregate meal program participants
4. Identified and surveyed nonparticipants with similar demographic and health characteristics
Study Design of Outcomes Evaluation

- Sample of LSPs from process and cost studies
  - Selected congregate meal site for each LSP
    - Sampled congregate meal program participants
      - Identified and surveyed nonparticipants with similar demographic and health characteristics
  - Selected home-delivered meal distribution location
    - Sampled distribution route and sampled home-delivered meal participants
Data Collection Instruments

• Outcomes survey
  - NSP Participation History, Usage, and Frequency
  - Types of Services Received
  - Recreational and Social Activities Available
  - Information and Referrals Available
  - Impression of Helpfulness of Program
  - Impressions of NSP Services and Meals
  - Participants’ Monetary Contributions
  - Eating Behavior, Diet, Food Preparation
  - Food Security
  - Health Insurance
  - Health Status, Mobility, Prescriptions
  - Depression, Loneliness, and Social Isolation
  - Demographic Characteristics

• 24-hour dietary recall
  - Automated Self-Administered 24-hour dietary recall (ASA-24) module
  - Administered in-person by interviewer
Survey Timeline and Sample Sizes

Baseline survey with 1,137 participants

Baseline survey with 1,164 nonparticipants

Followup survey with 754 participants and 939 nonparticipants
Outcome Measure: Food Security

• Having access at all times to enough food for an active, healthy life for all household members

• Based on USDA’s six-item food security module based on 30-day recall

• Food insecurity and very low food security
Outcome Measure: Socialization

- Revised UCLA Loneliness Scale (R-UCLA) based on responses to three questions related to how often one feels lack of companionship, left out, and isolated from others

- Patient Health Questionnaire 2 (PHQ-2) based on two questions assessing frequency of depressed mood over past two weeks. Used to screen for depression

- Self-reported satisfaction with opportunities to spend time with other people
Outcome Measure: Diet Quality

- Percentage contribution program meals made to participants’ nutrient intakes
- Usual intakes of vitamins, minerals, and macronutrients relative to recommendations
- Healthy Eating Index 2010 scores (HEI-2010) to assess overall diet quality
Descriptive Analysis Methods

• Describe characteristics of older adults, impressions of program, valuation of meals and services

• Use percentages, means, and medians

• Describe characteristics separately for congregate meal (CM) and home-delivered meal (HDM) participants

• Based on weighted data, participant findings are nationally representative of the population of CM and HDM participants
Characteristics of Program Participants and Impressions of Meals and Services
Demographic Characteristics

• CM and HDM participants similar in terms of gender, veteran status, whether they lived alone, and race and ethnicity
  – More than 2/3rds were women
  – 15 to 17 percent were veterans
  – About 60 percent lived alone
  – 14 to 18 percent non-Hispanic black; 9 to 13 percent Hispanic

• Compared with CM participants, HDM participants were older, had less education, and were more likely to be widowed
  – Average age was 77 (CM) versus 82 (HDM)
  – 24 to 40 percent had not completed high school
  – 47 to 52 percent were widowed

Source: AoA NSP outcomes survey, weighted data, Tables III.1.
Frequency of Participation

CM participants

- 5 or more days: 43%
- 3 to 4 days: 39%
- 1 to 2 days: 18%

HDM participants

- 5 or more days: 71%
- 3 to 4 days: 14%
- 1 to 2 days: 15%

Source: AoA NSP outcomes survey, weighted data, Table III.14.
Geographic Access to Food in Urban Areas: Median Number of Retailers Within 1 Mile of Home

- **Supermarkets, superstores, and large grocery stores**
  - CM participants: 1
  - HDM participants: 1

- **Medium grocery stores**
  - CM participants: 0
  - HDM participants: 0

- **Small grocery stores**
  - CM participants: 0
  - HDM participants: 0

- **Convenience stores**
  - CM participants: 5
  - HDM participants: 4

- **Specialty stores**
  - CM participants: 0
  - HDM participants: 0

- **Other outlets**
  - CM participants: 3
  - HDM participants: 3

Source: AoA NSP outcomes survey, weighted data, Table III.24.
Geographic Access to Food in Rural Areas: Median Number of Retailers Within 5 Miles of Home

Source: AoA NSP outcomes survey, weighted data, Table III.25.
Food Security

CM participants

- Food secure: 84%
- Food insecure with low food security: 12%
- Food insecure with very low food security: 4%

HDM participants

- Food secure: 77%
- Food insecure with low food security: 16%
- Food insecure with very low food security: 7%

Source: AoA NSP outcomes survey, weighted data, Table III.26.
Adequacy of Income and Food Coping Strategies

Income does not cover needs

Has to choose between buying food and buying medications

Has to choose between buying food and paying utility bills

Has to choose between buying food and paying rent

Would skip meals or eat less in absence of NSP

Source: AoA NSP outcomes survey, weighted data, Table III.29.
Receipt of Other Food Assistance

- **Receive SNAP benefits**: 27 CM participants, 30 HDM participants
- **Receive food from a food pantry or food bank**: 17 CM participants, 14 HDM participants
- **Receive meals provided by emergency kitchens**: 11 CM participants, 3 HDM participants

Source: AoA NSP outcomes survey, weighted data, Table III.30.
Impressions of Meals

• Many congregate meal participants were satisfied with:
  – Attractiveness of dining area (96 percent)
  – Overall meals (95 percent)
  – Amount of food (91 percent)
  – Proper temperature of food (91 percent)
  – Appearance of food (86 percent)
  – Way food smells (85 percent)
  – Variety of food (84 percent)
  – Taste of food (81 percent)
  – Foods provided (79 percent)
  – Meets special dietary needs or restrictions (73 percent)

• Similar findings for home-delivered meal participants

Source: AoA NSP outcomes survey, weighted data, Table III.35.
Effects of Program Participation on Food Security and Socialization Outcomes
Analysis Methods

• Selected matched comparison group using Medicare records and geography
  – Collected participants’ SSNs as part of outcomes survey
  – Obtained Medicare records for participants
  – Identified potential nonparticipants in same geographic service area with similar characteristics to participants
  – Screened nonparticipants for eligibility
  – Conducted interview with nonparticipants

• Multivariate regression analysis to account for observed differences between participants and nonparticipants

• Propensity-score matching based on machine-learning algorithm

Diet Quality Analysis
Background on the Diet Quality Analysis

• Objectives of the analysis
  – Describe the quality of participants’ diets
  – Determine the impact of participation on diet quality

• 24-hour dietary recall data
  – Collected detailed information on all foods and beverages consumed during preceding 24 hours
  – Subset of participants and nonparticipants completed 2nd recall
  – Provide data on the amounts of nutrients and food groups consumed over 24 hours
Outcome Measure: Diet Quality

- Percentage contribution program meals made to participants’ nutrient intakes
- Usual intakes of vitamins, minerals, and macronutrients relative to recommendations
- Healthy Eating Index-2010 scores (HEI-2010) to assess overall diet quality
Contribution of Program Meals to Participants’ Daily Nutrient Intakes

• Identified foods consumed from program meals versus other sources

• Both congregate and home-delivered meals contributed substantially to participants’ diets

<table>
<thead>
<tr>
<th></th>
<th>CM participants</th>
<th>HDM participants</th>
</tr>
</thead>
<tbody>
<tr>
<td>Percentage of daily calories</td>
<td>41</td>
<td>38</td>
</tr>
<tr>
<td>Percentage of daily nutrients</td>
<td>39 to 47</td>
<td>35 to 47</td>
</tr>
</tbody>
</table>

• Program meals made largest contributions to participants’ intakes of protein, vitamin C, vitamin A, alpha-linolenic acid, and sodium

Source: AoA NSP 24-hour dietary recall (Day 1), 2015-2016, weighted data, Table III.9.
Assessing Whether Participants’ Usual Nutrient Intakes Met Recommendations

• Federal nutrition standards provide recommendations for amounts of nutrients to consume
  – Dietary Reference Intakes
  – Dietary Guidelines for Americans

• Nutrient recommendations should be met over time and applied to measures of usual intake

• Estimated usual nutrient intakes using method developed by the National Cancer Institute
  – Provides estimates of the percentage of participants with usual nutrient intakes that met recommendations
Healthy Eating Index-2010

• Diet quality index that assesses conformance to the 2010 Dietary Guidelines for Americans

• Consists of 12 components and a total score
  – 9 adequacy components
    • Total fruit
    • Whole fruit
    • Total vegetables
    • Greens and beans
    • Whole grains
    • Dairy
    • Total protein foods
    • Seafood and plant proteins
    • Fatty acids
  – 3 moderation components
    • Refined grains
    • Sodium
    • Empty calories
• HEI-2010 scoring
  – Each component has a maximum score
  – Scores assigned based on amounts of foods and calories consumed
  – Total score is sum of component scores

• Higher scores indicate better conformance with Dietary Guidelines recommendations and higher diet quality

• Estimated mean HEI-2010 scores using method developed by the National Cancer Institute
  – Scores are expressed as percentage of maximum possible score
Effects of Program Participation on Diet Quality Outcomes
**Effects of HDM Program Participation on Usual Nutrient Intakes**

Percentage of HDM participants and nonparticipants that met recommendations

***, **, * Difference between participants and nonparticipants is significantly different from zero at the 0.01, 0.05, or 0.10 level.

Source: AoA NSP 24-hour dietary recall (Day 1 and Day 2), 2015-2016, weighted data, Table IV.7.
Effects of CM and HDM Participation on Overall Diet Quality

• CM participants had significantly higher HEI-2010 scores than nonparticipants for:
  – Total HEI-2010 score (66 versus 59 percent)
  – Total fruit (97 versus 72 percent)
  – Dairy (69 versus 57 percent)
  – Total vegetables (90 versus 78 percent)
  – Refined grains (78 versus 60 percent)

• HDM participants had significantly higher HEI-2010 scores than nonparticipants for:
  – Dairy (72 versus 58 percent)
  – Refined grains (74 versus 64 percent)

Note: All differences between participants and nonparticipants were significantly different from zero at the 0.10 level or lower.

Source: AoA NSP 24-hour dietary recall (Day 1), 2015-2016, weighted data, Table IV.8.

Implications for Future Research: CM Participants

• Food security
  – Determinants of food insecurity and food coping strategies
  – Characteristics and challenges in making ends meet

• Socialization
  – Role of CM sites’ provision of socialization activities and the number of activities that sites offer

• Diet quality
  – Food choices and key sources of nutrients to identify specific foods to target through nutrition education
Implications for Future Research: HDM Participants

• Food security
  – Reasons why participants receive varying amounts of program meals and how their food needs are assessed

• Socialization
  – Characteristics of the participants who reported limited engagement from the delivery person
  – Differences in program staff engagement for participants that receive varying amounts of program meals

• Diet quality
  – Comparison of food choices between CM and HDM participants
Thank You!

• Mathematica extends our sincere thanks to all of the SUA, AAA, and LSP staff who completed study surveys, provided data for the meal cost analysis, and helped facilitate a successful outcomes survey

• Heather Menne (AoA/ACL Project Officer)
  – Heather.Menne@acl.hhs.gov

• Susan Jenkins (AoA/ACL Project Officer)
  – Susan.Jenkins@acl.hhs.gov

• James Mabli (Evaluation Project Director)
  – JMabli@mathematica-mpr.com

• Liz Gearan (Evaluation Co-Principal Investigator)
  – LGearan@mathematica-mpr.com
Evaluation Reports

- Process study report

- Cost study report

- First outcomes evaluation report
  - www.acl.gov/sites/default/files/programs/2017-07/AoA_outcomesevaluation_final.pdf

- Second outcomes evaluation report (anticipated summer 2018)
  - Present participants’ healthcare utilization and behavior characteristics
  - Estimate effect of participation on hospital admissions and readmissions, emergency department visits, primary care physician visits, home health episodes, admittance to a skilled nursing facility, admittance to a nursing home, and total Medicare costs
Extra Slides
Other Data Sources Linked to Outcomes Survey Data

- **American Community Survey data**
  - Used to obtain characteristics of respondents’ neighborhoods

- **Geographic food access data**
  - Based on respondents’ residential street addresses and more than 200,000 food retailer locations

- **NSP process and cost data**
  - Linked to assess differences in impacts by program characteristics and meal cost

- **Medicare administrative records (ongoing)**
  - Linked to define patterns of health care behavior and utilization based on beneficiaries’ claims

</table>
Comparison with Findings from 1995 Evaluation

- Demographic composition of participants has remained stable over time
  - 9 percent of HDM participants were Hispanic (vs. 5 percent in 1995)
  - 60 percent of CM participants lived alone (vs. 57 percent in 1995)

- Participants continue to have significant economic needs
  - 31 percent of CM participants had income below poverty (vs. 34 percent in 1995)
  - 35 percent of HDM participants had income below poverty (vs. 48 percent in 1995)

- Most participants continue to be satisfied with program services
  - Satisfaction with taste, appearance, and variety of food remains high (>95 percent)

- Participants continue to have significant chronic health conditions
  - Increase in percentages of participants had doctor-diagnosed chronic health conditions related to high cholesterol, diabetes, and breathing or lung problems

- Number of years of participation has remained generally similar
  - HDM participants have participated for longer than in 1995
  - CM participation has remained the same over time
